

WAN Link Performance & Strategy Report

****Location:**** NEW SEB Tanishq Store, delhi

****Vendor:**** AIRTEL

****Link Type:**** ILL

****Business Hours:**** 09:00–18:00

****Provisioned Speed:**** 35.0 Mbps

1. Usage Pattern Analysis

Analysis shows this 35 Mbps link is completely inactive, with zero recorded traffic across more than 127,000 data points. Usage is consistently 0.00 Mbps during both business and off-hours. This total lack of utilization is a significant anomaly, suggesting the circuit is not correctly configured or is serving a non-operational purpose.

2. Capacity Planning Recommendations

The link is significantly over-provisioned. Since there is no traffic, current data indicates no bandwidth is required. An immediate investigation into the link's business purpose is essential.

- ****Conservative:**** 0 Mbps
- ****Balanced (Recommended):**** 0 Mbps
- ****Aggressive:**** 0 Mbps

If the investigation confirms the link is not needed, it should be decommissioned.

3. Performance Risks & Bottlenecks

There are no performance risks, congestion, or bottlenecks. While SLA compliance is 100% "Excellent," this is solely due to the complete absence of traffic on the network.

Conclusion

This link should be investigated for immediate decommissioning to realize full cost savings, as it currently shows no evidence of use.
